Years of scientific SUCCESS

The whiteSKY implant system has proven its value at both a clinical and a scientific level since its launch in 2006. Scientifically sound, long-term published results which span more than 15 years attest to its success.

These findings prove that whiteSKY zirconia implants can achieve results which are comparable to those obtained with titanium implants.

Studies have also investigated and demonstrated

bone healing and integration into soft tissue.

The soft tissue-implant surface attachment has been particularly highlighted by these studies.¹⁾

The histological observations are also confirmed in clinical use. They are attributable to the material and an ideal surface roughness.

whiteSKY thus represents the highest standards in aesthetics, safety and functionality.

We have developed the new whiteSKY generation based on these many years of experience.

With the whiteSKY Tissue Line and the whiteSKY Alveo Line, we are building on this success story of classic zirconium implants. We stand for holistic and optimal care.

¹⁾ Stadlinger B. et al.: Comparison of zirconia and titanium implants after a short healing period. A pilot study in minipigs; International Journal of Oral Maxillofacial Surgery 2010; 39; 585 – 592

Your benefits

- Live metal-free!
- Improved aesthetics and therefore almost invisible!
- Optimal body compatibility
 - Hardly any incompatibility risks ("biocompatibility")
 - No risk of allergy
 - Low risk of inflammation
 - No temperature sensitivity
- High success rate
- Ceramic does not react to electromagnetic vibrations from electronic devices

Are you also susceptible to periodontitis?

Then zirconia implants are the right choice for you!

The gums adapt excellently, meaning less plaque accumulates and periodontitis can be avoided.
